IMPORTANT NOTICE

Considerable effort has been expended to make the IC MASTER accurate and complete. The IC MASTER cannot, however, assume responsibility for inaccuracies, omissions, manufacturers' claims or their representations. HOW TO USE THE IC MASTER

The 1989 edition of the IC MASTER is arranged in three volumes. Each volume serves a specific purpose to help you find the integrated circuit or related product you need. The table of contents on page 1 describes what is in each volume. The table also includes the starting page number for each advertiser.

The IC MASTER is a functional work. You know what you need. The MASTER helps you find it.

Here are typical problems.

Q. What kinds of functions does the MASTER cover?

A. Turn to page 10 in **Volume One**. Here is a complete list of the devices covered. The page and line numbers refer you to the beginning of the Section in which a particular function appears.

Q. Who makes a 16384 x 1 static RAM with an access time of 70 ns or faster? What are my technology choices?

A. Pick up Volume 1. Turn to the MEMORY section. The first page of the section tells you where the listings of your device begins. See this under:

RAMS
Bubble
Dynamic
Static

Turn to the first page of static RAMs. In the first column you see the **Organization**. Browse through the pages until you reach the **16384 x 1** listings. Now look through the listings until you find the access time and characteristics you need. Device numbers are shown by manufacturer. The device numbers of advertisers in the 1989 IC MASTER appear in **bold face**. The page number following the device number is where additional information may be found in **Volume Two**. At the extreme right you will see line numbers. These are the specific lines where a device appears.

Q. Which microprocessors are listed in the MASTER? How do I find the microprocessor I need?

A. All commercially available microprocessors are listed in the MASTER. Start with the **microprocessor** listing in the **Master Selection Guide Index** (starts on page 10). Here you will find the various kinds of products you will need listed according to function and bit size. Turn to the various pages shown and then to the advertiser's page where more detail may be available.

Q. Who makes a Dual, Low Offset Voltage Op Amp?

A. This is a **LINEAR** device. Turn to the LINEAR section in Volume One. The first page of the section shows the starting page for each type of device. Turn to the page where **Dual Units** appear. Look down the list for the device you need. Advertisers' devices are listed in **bold face**. Turn to the page in Volume Two where more information may be available.

Q. I need an IC with Music capability. Which Master Selection Guide should I use?

A. Turn to the **Master Selection Guide Index** starting on page 10. Look through the list until you find **Music**. The page numbers for each kind of device are shown.

Q. I plan to use a digital gate array or some other semicustom ASIC in my next project. Where do I find it in the MASTER? Who makes these things?

A. Turn to Volume Three. Turn to the first page of **ASICs/Custom**. Find Gate Arrays and all of the other devices listed here. Now you can find the device you need. After you find the type of device you need, turn to the proper page and find the manufacturer. Advertisers' pages follow the selection guides in Volume three.

Q. I know the digital IC I need is available. Is it available in a surface mount package?

A. There are two ways to solve this problem. If you know the manufacturer's device number, turn to the Part Number Index in Volume One. Find the basic number and the page number and line where that device is listed in the MASTER. Turn to that page. If the device is available for surface mounting, an open diamond symbol will appear. You can also turn directly to the DIGITAL section and turn to the function of the device you want. The symbol will indicate an SMD is available.

Q. I am looking for an application note on a specific device. Where can I find out if one is currently available?

A. Pick up Volume One. Turn to the Application Note Directory. Here you will find app notes arranged by **function**. Find the function involved and turn to the page where the app note is listed.

IC MASTER

Q. We need a device that meets MIL standards. Where do I look in the MASTER?

A. Turn to the MILITARY Section in Volume One. The Military Device Testing table shows which manufacturers do what kinds of MIL work. Followed by the MIL-STD-1562R directories for microcircuits which contains six tables relating to various standards of classification. The next list is a QPL listing based on the latest Defense Electronics Supply Center (DESC) Qualified Product Listing. Additional Information is often supplied by the advertisers' pages in Volume Two.

Q. I know the basic part number is 2502 and that's all I know. Where do I look?

A. That's easy in the MASTER. Turn to the Part Number Index. All prefixes and suffixes have been stripped away. Turn to the page where 2502 appears. All manufacturers with that kind of number appear in order along with the page and line number where the device is described.

Q. How many manufacturers claim to make a pin-for-pin function-for-function equivalent to a Motorola MC68000?

A. Turn to the Alternate Source Directory in the back of Volume One. Turn to Motorola. Those manufacturers who claim to be equivalent are listed in order. If you have an MS-DOS computer with a hard drive, you can get the 1989 IC MASTER **Alternate Source Directory** on a disk. The disk is Clipper compiled from dBase III + and is delivered compressed by PKARC. This is the complete list of alternate sources and allows you to add notes such as your own part numbers, prices, sources and the like. Call Hearst (516) 227-1300 and ask for Book Sales for further information.

Q. I looked in the Alternate Source Directory. The part I want an alternate source for isn't listed. Why not?

A. Are you sure you looked through the entire listing for the original manufacturer? Some devices may be listed in odd ways depending on how the MASTER's editors receive the information. Then there is the probability that no other manufacturer makes an exact replacement for your part. It is important for you to understand how the Alternate Source Directory is compiled. Manufacturers supply the information that **their** part is an exact replacement for **another** part. The original manufacturer does **not** tell us his part can be replaced by those listed.

Q. I need an 8/16-bit microcomputer board with an 8 MHz clock frequency and a Multibus support system. Can I find this in the MASTER?

A. Yes! Pick up Volume Three. Turn to the MICRO-COMPUTER BOARD Section. Continue to turn pages until the 8/16 appears in the first column. Then look at all of the available boards to find the board you can use.

 The logo for IC MASTER features a stylized graphic of an integrated circuit (IC) on the left, with the letters 'IC' in a bold, blocky font. To the right of the graphic, the word 'MASTER' is written in a large, bold, sans-serif font.

Q. I have a Valid Logic's "Summary" workstation. Which front end tools are compatible? Can I get one with circuit simulation? What capabilities does it have? Who makes it?

A. Pick up Volume Three. Turn to the Design Automation Section. Check the first page. You will see what is available in the Section. Under Design Tools you will find Front End Tools and Circuit Simulators. Read down for your parameters and across for the vendor.

Q. What do the manufacturers' part numbers mean? I have a Signetics N8X02N. What do all the letters and numbers mean?

A. Look in Volume One for the Part Number Guide. Turn to the Signetics portion. Now you know the **N** prefix means, zero to plus seventy degrees Centigrade. The **N** suffix indicates the package style. The numbers and letters in the middle are the device type. Each manufacturer has a different code system. Understanding the system is a great help in comparing devices.

Q. I found the device I want in the MASTER. What are the pinouts? Where can I get more details? Where can I get a price? What is the delivery time?

A. You have just defined exactly what the IC MASTER does. The MASTER is a guide to tell you which devices are available on a commercial basis. After you know this, the next step is to contact the manufacturer, a local sales office or a distributor.

Q. Where can I find the addresses and telephone numbers of manufacturers, local sales offices and distributors?

A. Pick up Volume Two. Turn to the Manufacturers and Distributors Directory. Read the first page. The information on this page will help you understand why the information in the Directory is so important. It will save you time and aggravation.

Q. I just saw a new device advertised in Electronic Products magazine. It isn't listed in the MASTER. Why not? When will it be listed?

A. Preparing the information for the annual IC MASTER is a tremendous undertaking. It requires the cooperation of every single manufacturer. All of the material must be organized, cross referenced and placed in the data base. This data base must be closed off in November in order to meet the publishing date of late January. That is why some devices are not listed. They came on the market too late for the deadline. There are two updates to the annual MASTER. They are called the **IC MASTER UPDATE**. One is issued in the late Spring and the other in early Fall. Be sure to sign up for copies when you get your new IC MASTER. If you are not sure whether or not you have requested the updates, please write to the Circulation Department at the address shown on page 2 of this MASTER. Be sure to indicate which edition of the MASTER you are using.

MASTER SELECTION GUIDE INDEX

(Guide to Product Categories)

When you know the desired function and need specific devices that perform this function, use this Index first. It is organized by functions and by key words. It leads to the beginning of the section containing not only the specified topic but also related devices. The Master Selection Guides that follow in volumes One and Three provide sufficient information to help you make an initial product selection, or to lead you to a group of device numbers and their manufacturers. They enable you to find the products most likely to satisfy your needs for a particular application.

All devices that appear in a selection guide are included in the **Part Number Index**. If you know the part number for a device, by referring to the Part Number Index, you can see the page and line number for data on that device. If the manufacturer of the device has included a data sheet in IC MASTER, the location of this data sheet is also shown in **boldface** type.

PART NUMBER INDEX

This Index shows the page and line where each device appears in the Master Selection Guide.

The Index is arranged in alphanumeric sequence, ignoring the manufacturers' prefixes and suffixes and using the basic part numbers.

The numbers are sequenced by reading the digits from left to right, assuming that letters come before numbers. (As an example, these numbers would appear in the following order: 5301, 531, 54LS01, 54139, 555.)

After each base number, manufacturers' names and full part numbers are listed. This arrangement allows you to find a device whether or not you know the name of the manufacturer or the manufacturer's prefixes. The page references in **BOLD FACE** lead to manufacturers' data pages in Volumes Two and Three.

This is an Index of all parts with identical basic part numbers, regardless of their function. **It is not an Alternate Source Directory.**

IC MASTER BELONGS ON YOUR BOOKSHELF

If you don't have your own IC MASTER, you can obtain your own copy by ordering now. Write for your own copy or order by telephone as described below.

IC MASTER is a three-volume set of technical data carefully organized to direct the engineer to the integrated circuits and related products that are closest to his specific needs. It is the surest and fastest way to find the optimum devices to answer an engineering design requirement. By ordering now, you won't have to borrow or search for IC MASTER the next time you need it.

Typical Use of IC MASTER

Can an engineer find out who makes a 256K dynamic RAM with an access time of 120 nanoseconds or faster in less than 30 seconds? He can if he turns to the Memory section of IC MASTER and looks for the 256K organization (words and bits per word) that he needs. Because each device is listed in order of access time, he can easily determine the devices that satisfy his speed requirements.

It's Easy to Order:

You can order IC Master simply by charging it to your Visa or Master Card credit card. To place your order call now: (516) 227-1300.

Or mail your purchase order to:

PART NUMBER GUIDE

Each IC manufacturer has his own special method of identifying products, usually through a system of logos, device number prefixes and suffixes. This Part Number Guide is arranged alphabetically by manufacturer and describes each company's part number system. JAN nomenclature is also covered.

	TP Telecom Products			
	TMP Terminal Management Processor			
	Temperature Ranges			
	Linear Devices			
	With proprietary linear circuits, a 1-2-3 numbering system is employed.			
	The 1 denotes a Military temperature range device (–55°C to 125°C), the 2 denotes an Industrial device (–25°C to 85°C), and the 3 denotes a Commercial device (0°C to 70°C). i.e. LM101/LM201/LM301. Exception to this are the LM1800 Series; some hybrid circuits which employ a "C" Suffix; and second-source products which follow the original manufacturer's numbering system.

ALL NEW with this edition of EEM **GET ORGANIZED!**

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M"

for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for \$25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add \$2.00 for postage and handling. An invoice will be mailed to you under separate cover.

Don't waste any more time. Get organized now!

APPLICATION NOTE DIRECTORY

The application notes in this directory can be located by function or device number.

1. To find out what is published by function, locate the closest topics in the index at right, turn to the pages indicated, and scan through the listings.

2. To find all the application notes covering a given device, look up the device in the Part Number Index at the front of this book. The ¶ sign leads to application notes.

The application notes are organized under the following headings: Digital, Microprocessor, Microcomputer Boards, Interface, Linear, Memory, ASIC/Custom, and Packaging. Beneath those headings are functional and applications categories arranged alphabetically. Within each category the notes are arranged in alphabetical sequence by title. When an application note fits under several categories, it is listed in one and cross-referenced by the others. If an application note covers specific devices or shows how certain devices are used, these device numbers are listed in parentheses just below the title.

The length of each application note is indicated in parentheses on the last line; if the note is bound into a book, the last line will show that it is part of a handbook, databook, or catalog.

Once you have determined which application notes you need, contact the manufacturer's sales office or write to the manufacturer. Be sure to give both the title and the application note number. Addresses and phone numbers are listed in the Manufacturers and Distributors Directory.

IC MASTER BELONGS ON YOUR BOOKSHELF

If you don't have your own IC MASTER, you can obtain your own copy by ordering now. Write for your own copy or order by telephone as described below.

IC MASTER is a three-volume set of technical data carefully organized to direct the engineer to the integrated circuits and related products that are closest to his specific needs. It is the surest and fastest way to find the optimum devices to answer an engineering design requirement. By ordering now, you won't have to borrow or search for IC MASTER the next time you need it.

Typical Use of IC MASTER

Can an engineer find out who makes a 256K dynamic RAM with an access time of 120 nanoseconds or faster in less than 30 seconds? He can if he turns to the Memory section of IC MASTER and looks for the 256K organization (words and bits per word) that he needs. Because each device is listed in order of access time, he can easily determine the devices that satisfy his speed requirements.

It's Easy to Order:

You can order IC Master simply by charging it to your Visa or Master Card credit card. To place your order call now: (516) 227-1300.

Or mail your purchase order to:

MILITARY PARTS DIRECTORY

This section is divided into three parts: (1) Military Device Testing for manufacturers able to perform various levels of screening, (2) MIL-STD-1562R directories for microcircuits considered to be the most acceptable for military applications, and (3) Military Parts—QPL SELECTION GUIDE for MIL-M-38510 Qualified Parts listed by function.

Military Device Testing lists the manufacturers who screen devices to MIL-STD-883, as well as devices that are radiation hardened. It also shows companies currently qualified to supply devices on the Qualified Parts List (QPL).

MIL-STD-1562R contains six tables. To make the best part selection for a military application, begin by looking up the industry generic number in Table IV—Cross References. You will be directed to one of the preceding tables by Table Number and Section to the best possible selection candidate.

Table I—Preferred Devices. All devices in this table have a dated military specification and a QPL source (Part I or Part II). These devices have no known reliability or availability problems and are recommended and preferred.

Table II—Potential Standardization Candidates. Devices listed in this table are those that have been selected for electrical characterization and are potential candidates for MIL-M-38510 specification or that have an active Military (DESC) Drawing. This table also includes devices that have military specifications but as yet have no QPL source. These devices should be considered for use in systems or equipment designs if a QPL source is anticipated.

Table III—Logistics or Continuous Replacement Only. This table contains devices that are not recommended for new designs because of diminished sources or obsolete technology, or because a preferred device listed in Tables I and II is now available which performs the same function.

Table IV—Inactive or Suspended Military Activity. This table contains devices that are not recommended for a new design. It also includes devices with a QPL status that has been cancelled or expired and there is no indication that a device manufacturer intends to requalify.

Table V—Not recommended under any circumstances. Devices listed in this table will also have a preferred device for new design.

Table VI—Cross References. (NATO status: NATO-P = NATO Preferred Device, NATO-G = NATO Guidance Device, NATO-F = NATO Future Device, NATO-L = NATO Logistic/Maintenance Device.

EXPLANATION:

The "MIL-M-38510" section indicates the IC manufacturers currently providing Q.P.L. ICs. More detailed information on the specific devices is given in the Qualified Products Listings which follow.

The "MIL-STD-883 Screening" section lists those manufacturers who are both set up and actively want to screen devices to the levels indicated.

"Other Screening" shows those who report that they want business calling for special military and industrial environmental screening procedures.

Devices listed in this table are those that have been selected for electrical characterization and are potential candidates for MIL-M-38510 specification or that have an active Military drawing (DESC). This table also includes devices that have dated military specifications but as yet have no QPL source. These devices shall be considered for use in systems or equipment designs if a QPL source is anticipated.

Devices listed in this table are those that have been selected for electrical characterization and are potential candidates for MIL-M-38510 specification or that have an active Military drawing (DESC). This table also includes devices that have dated military specifications but as yet have no QPL source. These devices shall be considered for use in systems or equipment designs if a QPL source is anticipated.

Devices listed in this table are those that have been selected for electrical characterization and are potential candidates for MIL-M-38510 specification or that have an active Military drawing (DESC). This table also includes devices that have dated military specifications but as yet have no QPL source. These devices shall be considered for use in systems or equipment designs if a QPL source is anticipated.

Devices listed in this table are those that have been selected for electrical characterization and are potential candidates for MIL-M-38510 specification or that have an active Military drawing (DESC). This table also includes devices that have dated military specifications but as yet have no QPL source. These devices shall be considered for use in systems or equipment designs if a QPL source is anticipated.

MILITARY

In the emerging world of advanced CMOS, TI has a big idea: EPIC™ ACL.

Presenting EPIC ACL, a broad and expanding family of advanced CMOS logic devices that offer major design advantages.

Consider: Simultaneous switching noise levels 50% lower than conventional end-pin ACLs, and 10% lower than advanced bipolar devices. Speeds comparable to bipolar 74F. Low CMOS power consumption. 24 mA sink/source currents for high drive capability. And flow through architecture for ease of design. Your choice of DIP or SOIC packaging, as well as AC and ACT options for both CMOS and TTL interface capability. Plus

alternate sourcing of the entire family by co-developer Philips/Signetics.

Those are the big ideas behind EPIC ACL — ideas that will enable you to extend the application of CMOS technology into markets formerly reserved for advanced bipolar devices.

Start some epic ideas of your own. With an ACL family that not only provides bipolar speed and performance, but reliable system-level operation as well. Best of all, it's available now. In quantity. At TI Authorized distributors everywhere.

EPIC ACL. A truly big idea in advanced CMOS logic.

INTRODUCTION TO DIGITAL

Digital devices are listed by major product families: CMOS, ECL, GaAs, or TTL, and within them by functional groups such as arithmetic, buffers and inverters. The adjacent table shows how these families and functional groups are organized. Digital circuits not in the major logic families are listed under the heading Digital-Special.

A separate guide for circuits specifically directed to Digital Signal Processing (DSP) applications is included within the Digital section. Some of these circuits may also be repeated in the Digital families, the Interface, or Microprocessor portions of IC Master.

A few digital devices, such as watch, clock, speech and music circuits, are not covered in the digital section, but are included in the Linear — Consumer guide.
